

The CHEST Foundation

Buy-A-Mask, Give-A-Mask Campaign

The CHEST Foundation is partnering with the nonprofit organization, American Mask Rally, to provide masks to those who need them most during the COVID-19 crisis. The Buy-A-Mask, Give-A-Mask campaign will directly aid frontline workers, such as medical professionals and essential workers, by providing them with quality, reusable personal protective equipment. As a supporter of the campaign, you will provide masks to clinicians, nurses, and respiratory therapists on the front lines in the hardest-hit areas, as well as provide masks to essential workers who we all are relying on during this time.

OUR GOAL

The CHEST Foundation is committed to helping our hardest-hit communities and combating the COVID-19 pandemic through this strategic initiative. We are asking you to Buy-A-Mask to Give-A-Mask. With this campaign, every donation made to the CHEST Foundation will provide a mask for one of the millions of medical professionals or essential workers (toll booth workers, grocery store workers, delivery drivers, and so on) in underserved communities who put themselves at risk every day to ensure our needs are met.

GOALS

- CHEST Foundation will raise \$50,000 to donate to American Mask Rally to provide masks to medical professionals and essential workers across America.
- Masks will be immediately sent to COVID-19 hot spots as determined by CHEST and the CHEST Foundation.
- By partnering with American Mask Rally, the CHEST Foundation will provide masks to frontline essential workers in underserved communities who need them the most.

ABOUT AMERICAN MASK RALLY

American Mask Rally is a nonprofit 501(c)3 organization that was created by the engineering team at Altavian, a manufacturing company based in Florida. One engineer, Travis Whitely, wanted to do something to help and give back during the COVID-19 crisis. He quickly began to realize that there was a desperate need for masks for medical professionals, like his wife Ashley. He began using the manufacturing company to create masks with an open design that could be 3D printed. Due to the demand, they discovered that they could speed up the process by using manufacturing methods like injection molding and vacuum forming. With direct guidance from doctors, physicians, and nurses working regionally at the University of Florida, the reusable masks were created and are a viable option for medical professionals—easy to breathe through, easy to sterilize, and comfortable to wear.

With every donation, the CHEST Foundation and American Mask Rally will provide personal protective equipment to those in need, especially in our underserved communities. **Help us reach our goal; give a gift today at chestfoundation.org/donate.**
