How to Use Your Pressair® Inhaler

Your clinician has prescribed medication that comes in a Pressair inhaler. It is important that you know how to use the Pressair device so that you can take your medication correctly and breathe better.

Important: Before using your Pressair inhaler for the first time, make sure 60 appears in the dose indicator window. This window shows the number of doses left in the inhaler. The device counts down by 1 each time you press the green button on the inhaler.

Note: If you are using a Pressair inhaler for the first time, complete these steps:

1. Tear the sealed pouch containing the inhaler at the notch, and then remove the inhaler from the pouch.
2. Remove the protective cap by pressing gently on the arrows on either side of the device and pulling outward.
3. Once color window is green you can proceed. Note: If the color window is red, press and then release the green button on the inhaler again.
4. Hold the inhaler away from your face, and then breathe out. Important: Do not blow into the inhaler.
5. Place the mouthpiece between your lips, and then close your lips around the mouthpiece.
6. Breathe in quickly and deeply through your mouth and the inhaler. You should hear a click. Keep breathing in to be sure you have inhaled the full dose of medication.
7. Exhale. Check the color window, and verify that it is red. A red color window means that you have taken the full dose correctly. If the color window is green, repeat step 6 and step 7.
8. Place the protective cap over the inhaler mouthpiece and press it until you hear a click.

When you have inhaled the last dose in the Pressair device, the dose indicator window will show 0, and the color window will be red. The device may also lock. Your inhaler is empty.

Dispose of the empty inhaler properly. Keep the Pressair device and all medications out of the reach of children and pets.
